of ci that have rarely mentioned before as opposed to the traditional ci techniques or methodologies employed in other books during the past decade a number of new ci algorithms are proposed unfortunately they spread in a number of unrelated publishing directions which may hamper the use of such published resources these provide us with motivation to analyze the existing research for categorizing and synthesizing it in a meaningful manner the mission of this book is really important since those algorithms are going to be a new revolution in computer science we hope it will stimulate the readers to make novel contributions or even start a new paradigm based on nature phenomena although structured as a textbook the book s straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners we believe that the book will be instrumental in initiating an integrated approach to complex problems by allowing cross fertilization of design principles from different design philosophies the second feature of this book is its comprehensiveness through an extensive literature research there are 134 innovative ci
